

System and Organization Controls 3 (SOC 3) Report

Corvid Cloud Services

For the period April 1, 2025 through March 31, 2026

Description of Services

Corvid Object Store: durable storage for any amount of data. Server-side encryption is available; customers are responsible for enabling encryption on buckets that hold sensitive data.

Corvid Compute: virtual machines in isolated networks. Customers are responsible for patching guest operating systems and configuring firewall rules for their instances.

Corvid Logs: collects platform API activity. Customers must configure a retention period for their log groups; by default logs are kept for 30 days.

Corvid Directory: identity service for customer workloads. Corvid manages the underlying hosts.
