

System and Organization Controls (SOC) 3 Report

Report on Lumenvault, Inc.'s Secrets Management Platform
Relevant to Security and Availability
For the period October 1, 2024 to September 30, 2025

Table of Contents

Section I: Independent Service Auditor's Report 2

Section II: Management's Assertion 3

Section III: Description of the System 4

D. Complementary User Entity Controls 5

Section I: Independent Service Auditor's Report

We have examined management's assertion that the controls within Lumenvault, Inc.'s system were effective throughout the period October 1, 2024 to September 30, 2025, to provide reasonable assurance that service commitments were achieved based on the trust services criteria relevant to security and availability. Complementary user entity controls are required to achieve those commitments.

Section II: Management's Assertion

Management asserts that the controls were effective, if complementary user entity controls and complementary subservice organization controls operated effectively.

Section III: Description of the System

A. Overview

Lumenvault provides a hosted secrets vault and key rotation service for engineering teams.

B. Subservice Organizations

Lumenvault uses Amazon Web Services (AWS) for infrastructure hosting and Cloudflare for edge network services. These subservice organizations are carved out of this report.

C. Infrastructure

The platform runs in multiple availability zones with automated failover and continuous monitoring.

The platform runs in multiple availability zones with automated failover and continuous monitoring.

The platform runs in multiple availability zones with automated failover and continuous monitoring.

The platform runs in multiple availability zones with automated failover and continuous monitoring.

D. Complementary User Entity Controls

Lumenvault's controls were designed with the assumption that certain controls would be implemented by user entities. User entities are responsible for the following:

1. Enforcing multi-factor authentication for all users who access the Lumenvault console.
2. Configuring single sign-on (SAML) and removing access for terminated personnel in a timely manner.
3. Restricting API tokens to least privilege and rotating them according to their own policy.
4. Reviewing audit logs exported from Lumenvault and retaining them to meet their own requirements.
5. Notifying Lumenvault promptly of any suspected compromise of credentials or secrets.

E. Principal Service Commitments

Lumenvault commits to 99.9% availability and encryption of all stored secrets.
